Scientific Breakthroughs for Radiant Health

Gleaming Intestinal Package

Would you like to get rid of your belly without having to do abdominal exercises?

A distended stomach is not just belly fat and a lack of exercise; it can also be accumulated fecal matter in your intestines. Pounds of the stuff can be clogging your plumbing and making you bloated and unhappy. Cleaning out your intestines can flatten your stomach, whiten your eyes and sweeten your breath.

Over 24 years I did 12 intestinal cleanses and noticed that each time my eyes would whiten, my face would become younger, my abdomen would flatten and my breath would become sweet.

In 1983 I was also a colon therapist in Santa Monica California where I saw numerous people, including movie stars come to the spa and clean out their plumbing. Everyone reported feeling lighter and better. However, it has been my experience that colonics and clay psyllium drinks are inferior to the following method of cleaning out the intestines. The following is so effective that one young women's eyes went from partially brown to more blue in 5 weeks.

In the book "Tissue Cleansing Through Bowel Management," Dr. Bernard Jensen shares with us the secrets of his success as a Chiropractic/Nutritional Doctor using intestinal cleansing. He also wrote a book called "Doctor Patient Handbook", in which he explains what a healing crisis is. He says that when the body is properly fed it will increase its energy levels to a point where it can safely eliminate stored toxins. Once these toxins begin to exit the tissues, people frequently experience cold and flu symptoms. This detoxification usually takes 3 to 7 days to clear from the body. Once cleared, energy soars to a much higher level. This detoxification process means you are getting younger and you will love the way you feel.

The most effective way to clean out the intestines is with oxygen.

Oxy Powder is a product, which releases oxygen into your intestines. This oxidizes the intestinal contents, turning them into a liquid. Your stools temporarily become liquid and your intestines get a thorough cleaning.

This cleansing results in many benefits. All the irritation of rotting food in the intestines is gone. Your intestines become happy and you also become happier overall. Your body can now more readily eliminate other toxins via the lymphatic channels; so whole body detoxification is vastly improved. Your intestines and your cells will now be able to absorb more nutrients. This will mean getting more energy from less food. If you have unwanted belly or body fat, you will probably find it melting off and your belly will be flatter. Now, if you want to harden up your abdominals, it will be easier to do as you will now have the energy to exercise the abdominal muscles.

Cleaning out the intestines with **Oxy Powder for 14 days** provides tremendous protection against all intestinal diseases like Irritable Bowel Syndrome, Colitis, Constipation, Diverticulitis and Colon Cancer. This detoxification also protects you from all other diseases, as all diseases have some element of autointoxication (self-poisoning caused by endogenous microorganisms, metabolic wastes, or other toxins produced within the body. Also called **autotoxemia**).

Sparkling clean intestines are the key to feeling happy, losing weight and having sweet clean breath. I recommend doing an internal cleanse at least once a year and depending on your health situation, maybe more than once. Our **Gleaming Intestinal Health Package** helps deliver this to you.

Oxy Powder alone is great but by combining **Oxy Powder, Probiotic Complex and Digesticol** you get the

ultimate cleansing program. By using all of these products, you will achieve a thorough intestinal cleansing and start re-implanting beneficial bacteria for ongoing improved digestion and elimination. After completing the 14 day usage of Oxy Powder you can begin to take **Probiotic Complex**. Take one to two capsules for 30 days. This will give you 12 strains of super powerful beneficial bacteria that took five years to create. Most beneficial bacteria supplements do not re-implant their beneficial bacteria into the intestines because the pH is too alkaline in the gut. Probiotic Complex has overcome this by including a bacterial strain called E. Faecalis that produces 6.25 times the amount of lactic acid over any other known probiotic bacteria. This bacteria helps insure that the others re-implant and grow. This E. Faecalis strain of bacteria has been found during in vitro studies to be effective against the most potent antibiotic resistant smartbug (methicillin resistant Staphylococcus aureus MRSA) and well has E. Coli 0157 (which causes food poisoning) H. pylori (causes peptic ulcers, morning sickness and migraine headaches), Bacillus cereus (cause of intestinal anthrax) and other harmful microorganisms. All twelve strains of beneficial bacteria combine to protect your intestines from candida and intestinal stagnation. They actually help your body manufacture B-vitamins for you and are essential to the digestion and elimination of your stools. Most people do not realize that the majority of the weight of your stools is beneficial bacteria not fiber, up to four pounds of beneficial bacteria live in the intestinal tract. You can eat a fiber-free meat based diet and with good probiotics and still have good elimination.

Taking **Digesticol** (one to two caps at the end of every meal) will give you a super powerful digestive enzyme product with the spore forming bacteria lactobacillus sporogenes. The enzymes help you more thoroughly digest all your proteins, fats and carbohydrates. This insures better absorption of your amino acids, fatty acids, sugars, vitamins, minerals, antioxidants and phytochemicals. The spore forming bacteria helps in the continued colonization of beneficial bacteria on a daily basis. Daily consumption of beneficial bacteria is essential to sweet clean intestines. Most people no longer eat raw fermented foods for their daily supply of beneficial bacteria. In the past, native people always included a cultured vegetable or dairy product in their diet to ensure the abundance of beneficial bacteria. They ate kefir, yogurt, cortido (South American cultured vegetables) and sauerkraut. Taking one Digesticol with every meal may dramatically improve your digestion and elimination. It is a superior product to be taken with every meal of cooked food. When I gave Digesticol to my 70-year-old father he told me that his bowel movements dramatically increased in volume. This is common and a sign of good health.

So for a flat stomach, whiter sparkling eyes and sweet clean breath try the **"Gleaming Intestinal Health Package"**:

Oxy Powder (120 caps), **Probiotic Complex** (30 caps or 60 caps) and **Digesticol** (90 caps).

The Package options are:

1. 30 caps Probiotic pack with the other two products is \$100.18.
2. 60 caps Probiotic pack with other two products is normally \$125.68.

Dosages and Directions for usage:

- Oxy Powder: 5-10 caps at bedtime for 14 days. Depending on your body weight, start with five and work your way up to ten or more to create liquid bowel movements.
- Probiotic Complex: After you finish using Oxy Powder for 14 days you can begin to take 1 to 2 caps of Probiotic Complex in the morning upon arising on an empty stomach.
- Digesticol: take one to two caps at the end of every meal

Happy hearts come from happy minds; happy minds come from happy bodies,

Stephen Heuer
